- **Languages:** C/C++, Java, Python, PHP, HTML, CSS, JavaScript, SQL
- **Framework:** React.js, Node.js, Express.js, Bootstrap
- **Tools/IDE:** Git, MongoDB, MySQL, Firebase, VSCode, Tableau, Postman, Retool**,** Google Teachable machine

PROJECTS

- **Recreate the Solar System (**GitHub): It is a drag-and-drop game helps the player recreate the solar system. The older version is launched at Olabs by the Maharashtra government.
  - **Technologies used:** HTML, CSS, Vanilla JS and REST API.

- **Planetary (**GitHub**):**This game is similar to the previous game to educate students about Solar System. It is an adaptive game made especially for individuals with visual impairments.
  - **Technologies used:** HTML, CSS, Vanilla JS and SpeechSynthesis (JS API).

- **Explore the moon (**GitHub**)**: It is an MCQ-based to assist students in learning about Moon. The 3D experience enhances the learning experience.
  - **Technologies used:** HTML, CSS, 3.js, blender.

- **VirTour (**GitHub**):** This won the third prize at the "bit n build" hackathon. We provide an Indian map where all the colleges are geotagged. On clicking the tag, we can take a virtual tour of the college combined with voice assistance.
  - **Technologies used:** Panolens.js (tour), Python (Speech synthesis, geotagging, web-scrapping).
